## DESIGN **INNOVATION**

Three decades of MX goggle evolution have led to this turning point, a landmark of technology so revolutionary that it will render ordinary goggles obsolete. Forget any notion of what defines high performance. Not since the early days of the sport has a single design brought so much innovation. Essential gear for anyone who rides for glory, rides for sport or just rides for fun, the Oakley Airbrake™ MX goggle is the new benchmark for protection, clarity, comfort and convenience.

# IMPACT PROTECTION

Modern dirt bikes generate massive amounts of torque and horsepower, which can turn dirt and rocks into a spray of ballistic missiles. Riders are getting more daring, and today's breed of guts and grit can lead to serious carnage. When it comes to impact resistance, the current crop of thin, stamped goggle lenses are simply not up to the task, so we created a game-changer in the arena of protection technology. This is the first ever MX goggle with a lens made of injection-molded Plutonite®, which is formed under extreme pressure to create a precisely engineered arc of protection for your eyes. Plutonite® is the most optically pure lens material ever utilized for MX goggles. With a confidence-inspiring force field for clarity of mind, Airbrake's Plutonite® lens gives you a laser-lock focus on victory.

# OPTICAL CLARITY

The next time you're charging through a rutted-out rhythm section or picking your line through a berm, consider this: ordinary MX lenses are die-cut from flat sheets of generic material then bent to fit conventional goggle. This crude process can result in optical distortion. That means things aren't really where you see them. Not so with Airbrake™ MX because the lenses are injection molded under extreme pressure to create a precise contour of optically correct geometry. It's a level of visual accuracy you need if you're serious about performance and safety.

## MAXIMUM PERIPHERAL

To become an MX champion, it takes a unique point of view – one that maximizes peripheral vision so you can spot challengers and out maneuver them until they're cussing into their face masks. That's what you get with Airbrake™ MX. Precision lens curvature is matched with sleek frame architecture, expanding your field of vision so you can conquer every obstacle on the track.

## SWITCHLOCK™ TECHNOLOGY

“Adapt and survive” is a motto for guys who are pummeled by tire roost. It’s not good enough. Airbrake™ MX is for those who adapt and conquer because it lets them switch up their vision with the convenience of Oakley Switchlock™ Technology. Our unique design makes the process of lens changing fast and hassle-free, so you can quickly swap lens tints to optimize visibility and comfort according to the light conditions. We’ve created a full array of optional lenses so you can arm yourself with innovation in any situation, from riding sand dunes in blinding sunshine to racing through shadows under stadium lights, and everything in between.

## INTEGRATED ROLL-OFF

Airbrake™ MX is available with a revolutionary roll-off system that utilizes an integrated cartridge canister inside the outrigger strap attachment for the ultimate in convenience and visibility. A clean surface moves into position with the tug of a cable, and compared to the skinny film of ordinary roll-offs that are like peeking through a tiny window, the vertical field of vision is significantly increased to provide a wide-open view of the track in front of you.

## ENHANCED COMFORT

Staying in the zone means eliminating every possible distraction. That's why Airbrake™ MX offers a level of comfort achieved through decades of Oakley innovation. This goggle is the culmination of every breakthrough we've made, and when you experience the way it fits and feels, you'll never compromise victory with a conventional goggle again. Airbrake™ MX is composed of ultra-strong, yet lightweight O Matter® combined with flexible urethane. The rigid outer frame holds the lens securely without the bending that can cause visual distortion, and a soft and pliable inner faceplate conforms to your face like it was made just for you.

## ADAPTABILITY SERVICEABILITY

When you wear out tires or want to replace the handlebars on your dirt bike, do you throw the whole machine away and go buy a new one? Of course not. So why should you have to do that with your goggles? Airbrake™ MX is equipped with a fully adaptable and serviceable chassis, allowing you to easily swap outriggers between tear-off and roll-off configurations, replace worn out foam faceplates, or switch the strap to match your style. Each component has been carefully engineered to work together in perfect harmony while allowing for serviceability over the long haul.

Ryan Villopoto is always on the hunt for a title shot, and clinching both the AMA Supercross Championship and the World Supercross Championship in 2012 means RV is a five-star general in his class. His Signature Series Airbrake™ MX goggle has stripes of green, and the no-hassle lens changing of Switchlock™ Technology leaves competitors green with envy. Ryan's bio includes guns, guts and glory, and Airbrake™ MX arms him with everything he needs to keep performance locked and loaded.

Jeffrey Herlings is fast enough in the sand to make a desert lion jealous, and aggressive enough to make big cats cover. The Dutch teenager earned the title of MX2 World Champion in 2012. All that breakneck speed and sand shrapnel doesn't worry him because he has the unrivaled protection of Airbrake™ MX, not to mention the fast and easy lens changing of its Switchlock™ Technology. Styled with orange highlights, this Signature Series edition is worthy of the young and hungry predator.

# AIRBRAKE™ MX RACE-READY

AIRBRAKE™ MX

*THIS RACE-HUNGRY DESIGN COMBINES THE UNBEATABLE INNOVATIONS OF AIRBRAKE™ MX WITH A REVOLUTIONARY NEW ROLL-OFF SYSTEM. INTEGRATED INTO THE OUTRIGGERS, THE SYSTEM GIVES YOU A CLEAN SURFACE WITH THE QUICK TUG OF A DRAWSTRING. YOUR TOTAL FIELD OF VISION WILL BE A THIRD BIGGER THAN ORDINARY ROLL-OFFS, AND IT EXPANDS YOUR UP-AND-DOWN VIEW BY AN INCREDIBLE 60%.*

- Fully-integrated roll-off system provides 60% more vertical field of view compared to standard systems
- Advanced pull-ratchet system provides 35 complete lens clearings
- Anti-friction suspension system minimizes surface contact between film and lens for smooth action in any weather
- Includes additional outrigger set for optional tear-off configuration
